

THE 1982 CENSUS OF AGRICULTURE

PRELIMINARY REPORT

OHIO: A FIRST IMPRESSION

By Maurice Goodrich Klein
Librarian, Reference Room
Department of Agricultural Economics
and Rural Sociology
The Ohio State University

Economics & Sociology Occasional Paper ESO #1090

Appreciation is expressed for the extensive assistance given by Kathleen Mihaiu in the preparation of the statistical table, pages 7 to 21, summarizing the preliminary Census by Extension Regions.

March 30, 1984

The 1982 CENSUS OF AGRICULTURE, PRELIMINARY REPORT, for Ohio and each of its eighty-eight counties has been received and may be consulted in the Reference Room, Department of Agricultural Economics and Rural Sociology (Room 242, Agriculture Administration Building).

The Census shows (compared to 1978) fewer farms, less farmland, and stable farm size (but smaller farms in Appalachian and Northeastern Ohio), more corporate farming, a moderate increase in the average value of land and buildings, sales of farm products increasing significantly but at a rate of increase well behind inflation, and more farms selling \$250,000 or more annually.

Farm Numbers - A decline in Ohio farm numbers that began shortly after 1900, and has been interrupted only by a brief back-to-the-farm movement during the depth of the Great Depression, slowed slightly from 1978 to 1982. The number of Ohio farms shrunk 2.5% from 89,131 in 1978 to 86,942 in 1982 (compare with Crop Reporting Service estimate of 92,830; no doubt sampling procedures account for differences between Census & OCRS figures). The statewide decrease in farm numbers, however, conceals as much as it reveals. Twenty-eight counties, mostly Appalachian or Northeastern counties, showed larger farm numbers, and, perhaps significantly, 25 of those 28 counties experienced a decrease in farm size, 14 an increase in the number of part-time farmers (while the number of part-time farmers statewide decreased 4.2%), and 10 showed decreases in the number of farms selling \$10,000 or more. While much of the State showed fewer, larger, and more prosperous farms, a nonetheless sizeable part of the State witnessed an increase in farm numbers, a decrease in farm size, and an increase in the number of farmers seeking non-farm income.

Land in Farms; Average Size of Farms - Like farm numbers, Ohio land in farms began to shrink shortly after 1900, and except for the brief back-to-the-farm movement during the Great Depression and a small increase when World War II veterans returned home, the shrinkage has not yet stopped. Like farm numbers, the loss of land in farms slowed from 1978 to 1982. Land in farms in Ohio decreased 2.4% from 1978 to 1982, and every section of the State shared in the decrease. However, while most counties in the South showed a decrease in farmland along with the rest of the State, Athens, Gallia, Lawrence, and Vinton showed increases. Statewide, average farm size remained at 177 acres, the first time since 1935 that no increase in farm size was registered (note, however, the Crop Reporting Service estimate of 185 acres in 1982). The size of farms in the Northwest increased from 203 acres in 1978 to 210 acres in 1982 (although the Crop Reporting Service estimated 203 acres in 1982), and the Southwest showed a smaller increase from 176 to 178 acres (against a Crop Reporting Service estimate of 175 acres in 1982). It should be noted, however, that not only did the statewide average farm size fail to show an increase for the first time since 1935, but that five of the ten top counties in farm income in 1982 (Wayne, Putnam, Auglaize, Preble, and Union) showed decreases in average farm size. Another indicator of regional trends: three of the four southern Appalachian counties which showed increases in total farmland showed decreases in average farm size: Athens from 178 to 174; Gallia from 138 to 128; and Lawrence from 135 to 122.

Corporate Farming - Because the Bureau of the Census deleted most county acreage statistics for corporate farming "to avoid disclosing

data for individual farms," analysis of the scale of corporate farming or the rapidity of its growth are difficult. Review of Census data shows clearly that numbers of corporate farms and acreage in corporate farms are not necessarily related. Statewide, the number of corporate farms increased 36% over 1978 (family-held corporate farms 33%, other corporate farms 56%); but in the Northwest region the increase was 66%. Although corporate farms account for only 2% of Ohio farms, they account for 5% of Ohio farmland, and tend to be concentrated in the best farming areas. Acreage held by corporate farms increased 44% over 1978.

Value of Land and Buildings - Despite the recent decreases in farm land values, the Census shows a 2.7% increase in the value of land and buildings from 1978 to 1982. The statewide figure conceals widely different trends in different parts of the State. Note the changes in value from 1978 to 1982 in the Extension Districts:

East	+16.3%
Northeast	+11.6%
Northwest	+ 1.2%
South	- 3.1%
Southwest	- 3.7%

Even regional figures for changes in value of land and buildings obscure the range of changes and trends within regions (for example, in the South District, Vinton County average values increased 72.6% while Pickaway County values decreased 16.5% from 1978 to 1982); see Map #4.

Farm Income. The total value of farm products sold increased 18.9% from 1978 to 1982; during the same period, the Consumer Price Index increased 48% (only three counties: Vinton at 213.8%, Licking at 69.4%, and Geauga at 50% had percentage increases larger than the increase in the CPI). Extension District experience:

East	+28.9%
Northeast	+26.8%
Southwest	+16.8%
South	+15.8%
Northwest	+14.9%

See Map #5 for the range of changes in farm income between 1978 and 1982.

The number of farms selling \$250,000 or more increased 64% between 1978 and 1982. The percentage of farms selling in the top two economic classes are shown by Extension District in the following table:

	\$250,000 or More	\$100,000-249,999
Southwest	3%	10.4%
Northwest	2.8%	10.3%
South	2.2%	7.9%
Northeast	2.2%	7.4%
East	.9%	3.8%

Farm Land Rented. 41.1% of all Ohio land in farms was rented by farm operators, a decrease of .9% from 1978. Districts vary significantly in the percentage of farmland rented by farm operators:

Northwest	51.6%
Southwest	47.3%
South	34.2%
Northeast	33.5%
East	28.3%

The percentage of farmland rented by farm operators varies from a high of 64.1% (Van Wert) to a low of 11.1% (Vinton). The percentage of farmland which is rented tends to be low in the Appalachian counties and high in the agricultural regions of western Ohio.

Farm Expenditures. Farm expenditures for livestock, poultry, feed, seed, plants, fertilizers, chemicals, fuel, and electricity averaged \$20,681 per farm in Ohio in 1982, up 35.6% from 1978.

	1982 Per farm Expenditure for selected items	Change from 1978
Southwest	\$27,197	32.6%
Northwest	24,637	33.1%
Northeast	18,574	37.0%
East	14,467	62.9%
South	14,069	24.6%

In review (compared to 1978): Ohio has fewer farms, more corporate farms, less farmland, larger farms in many farming counties and smaller farms in many Appalachian counties and in Northeastern Ohio. The value of land and buildings, and the sales of farm products increased at a slower rate than either inflation or farm expenditures.
